

24 March 1961

MEMORANDUM FOR: Assistant Director for Scientific Intelligence
FROM : Executive Officer

25X1

The following is an extract of a memorandum prepared by [redacted] who is our representative at the pre-Presidential news conferences conducted by Pierre Salinger. The Director thought it would be of interest to you.

"11. Mr. Lloyd exhibited several pictures which had been taken by the Tyros II satellite which were much better than had been expected. These results were already known in scientific circles and he raised the question as to whether they should be released to the public. Mr. Salinger said he would like to take the matter up with the President before giving a judgment."
